

1 TSdbi Functions

In R, the functions in this package are made available with

```
> library("TSdbi")
```

The TSdbi package provides the common parts of an interface to time series databases. To use this package it is necessary to also have one of the database specific packages, such as TSMysql, TSSQLite, or TSpadi. More extensive vignette examples are provided in each of those packages. (The vignettes are similar, but do not build without one of the database specific packages.)
