

index.H(clusterSim)

Hartigan index
(for metric data only)

$$H(u) = \left(\frac{\text{tr} \mathbf{W}_u}{\text{tr} \mathbf{W}_{u+1}} - 1 \right) (n - u - 1),$$

where: \mathbf{W} – within-group dispersion matrix,
 u – number of clusters ($u = 1, \dots, n - 2$),
 n – number of objects.

The estimated number of clusters is the smallest $u \geq 1$ such that $H(u) \leq 10$.
